## Harvest Advanced as Freezing Weather Arrived

Cold weather and snow flurries accompanied producers as they proceeded towards completion of this year's corn harvest, according to Cheryl Turner, State Statistician, USDA NASS, Ohio Field Office. With recent precipitation events, soil moisture levels improved in most areas of the State, although a sustained dry zone persisted in southwestern counties. The U.S. Drought Monitor showed moderate to severe drought in 37.7 percent of the State, down from 66.8 percent from the week before. Abnormally dry conditions or worse were observed in 76.3 percent of the State, down from 88.3 percent during the previous week. Topsoil moisture conditions were rated 17 percent very short, 33 percent short, 47 percent adequate, and 3 percent surplus. Statewide, the average temperature for the week ending on November 20 was 30.6 degrees, 10.9 degrees below normal. Weather stations recorded an average of 0.22 inches of precipitation, 0.43 inches below average. There were 5.0 days suitable for fieldwork during the week ending November 20.

**Corn for grain** was 92 percent harvested, and the average moisture content of corn grain at harvest was 18 percent. **Winter wheat** was 93 percent emerged and winter wheat condition was rated 58 percent good to excellent; in the southwest, wheat was slower to emerge due to dry conditions. **Soybean** harvest was nearly complete, but there were reports that some operators in the northwest still had soybeans to be harvested.
